

Shivam Kumar Saraffa

Full Stack & AI Engineer | Remote (India-based, open to US time-zone overlap)

+91 9801966700 • ssaraffa786@gmail.com • [Portfolio](#) • [LinkedIn](#) • [GitHub](#) • [Codeforces](#) • [LeetCode](#)

SUMMARY

Full Stack & AI Engineer with 3 years shipping production systems end-to-end — from autonomous multi-agent LLM systems and hybrid-retrieval RAG pipelines to NestJS/PostgreSQL microservices and React/Next.js frontends. Built 10+ LLM agents (Claude, OpenRouter, LangGraph) and a trust-and-verification microservice powering bilingual worker assessments. Strong on schema design, distributed job queues, API hardening, and end-to-end ownership in remote teams.

EDUCATION

National Institute of Technology, Hamirpur — B.Tech (CGPA 8.66 / 10)

Jul 2019 – May 2023

SKILLS

- **AI / LLM:** Claude (Sonnet, Haiku), OpenRouter, LangChain, LangGraph, Haystack v2, Qdrant, RAG (hybrid dense+sparse, cross-encoder reranking), multi-agent orchestration, tool calling, structured output
- **Languages & Frontend:** TypeScript, JavaScript, Python, Java, SQL • React, Next.js (App Router), Redux, TanStack Query, shadcn/ui, Tailwind
- **Backend & Data:** Node.js, NestJS, Express, Django/DRF, FastAPI, Knex.js, BullMQ, REST, WebSockets, OpenAPI • PostgreSQL, MySQL, MongoDB, Qdrant
- **DevOps & Security:** Docker, GitHub Actions, CI/CD, GCP Cloud Run, Vercel, Coolify, Pino • JWT, OAuth, Passport, Helmet, CORS, rate limiting • Jest, Playwright

EXPERIENCE

Alan Scott UpNUP Life

Remote

Software Development Engineer — React, TypeScript, NestJS, PostgreSQL

Oct 2025 – Present

- Designed and shipped asli-samajh, a NestJS/PostgreSQL trust-and-verification microservice with Knex.js, BullMQ workers, and a polymorphic ownership model (auth'd worker or guest) enforced via a DB-level XOR CHECK — enabling a frictionless try-before-signup flow.
- Built an internal RAG chatbot (Python, Haystack, Qdrant) over private docs with hybrid dense+sparse retrieval and cross-encoder reranking, delivering multi-turn citation-grounded answers.
- Modeled the assessment schema in Knex (cascade rules, partial indexes, denormalized JSONB skill_profile recomputed inside transactions); added BullMQ identity sync decoupling Core. Hardened APIs with Helmet, CORS, ThrottlerGuard, strict ValidationPipe, and cross-service JWT (passport-jwt) for three roles.
- Built a bilingual (EN/HI) React + TypeScript assessment platform with TanStack Query and shadcn/ui — resumable assessments, guest-to-worker session migration, and an employer console with bulk CSV onboarding (header alias detection, optimistic cache invalidation).

Dhamm.ai LLP

Remote

Full Stack Developer — JavaScript, Node.js, NestJS, React

Apr 2025 – Oct 2025

- Built responsive, accessible React component libraries with modular patterns; applied code splitting, lazy loading, and caching to materially cut median page load time and stabilize cross-browser behavior on Chrome, Firefox, and Edge.
- Owned features end-to-end across API contracts, REST integration, Jest tests, PR reviews, and monitoring — reducing defect escape across sprints.

Joveo Technologies Pvt. Ltd.

Remote

Frontend Developer Intern — React, AngularJS, Redux

Nov 2024 – Feb 2025

- Built reusable React components with Redux/Context; contributed to an AngularJS-to-modern-Angular migration, refactoring components and resolving breaking changes; added CI tests and bundle optimizations supporting production releases.

PROJECTS

AI Engineering — Autonomous Agents & RAG | Python, Claude, OpenRouter, Haystack v2, Qdrant, FastAPI

- Shipped 10+ autonomous LLM agents (recruitment, travel, sales, finance, e-commerce) using a reusable orchestrator + 4–8 sub-agent pattern with ThreadPoolExecutor for parallel tool calls — cutting run time 3–5× over sequential execution.
- Integrated OpenRouter as a single gateway across Claude Sonnet/Haiku and Moonshot Kimi K2 with cost-aware routing, plus JSON-mode prompting with balanced-bracket extraction to eliminate brittle output parsing.
- Built a multi-turn citation-grounded RAG over private docs — hybrid retrieval (bge-m3 dense + SPLADE sparse, RRF-fused in Qdrant), cross-encoder reranking (bge-reranker-large), heading-aware Markdown chunker; FastAPI backend on CPU at ~6s/query.

LabReport Pro — Multi-tenant SaaS for Pathology Labs | Django 5, DRF, React 18, TypeScript, PostgreSQL, GCP Cloud Run

- Full-stack pathology-lab SaaS with 50+ tests, 25+ templates, and 12 health checkups, deployed on GCP Cloud Run with Cloud Build CI, Secret Manager, and GCS-backed PDF persistence; multi-tenant data with row-level lab scoping, soft-delete, and django-simple-history audit trails.
- Engineered a WeasyPrint PDF renderer using CSS Paged Media with per-template interpretation grids and package reports stitched via pypdf; React client uses JWT with silent refresh-token rotation (axios interceptor with shared in-flight refresh promise) to eliminate spurious logouts.

Sarkari Naukri — Bilingual Government Job Portal | Next.js 16, React 19, TypeScript, Tailwind v4

- Bilingual (EN/HI) job portal on Next.js 16 App Router with a Cheerio crawler normalizing external HTML to structured JSON, ingested via GitHub Actions/node-cron; SEO-first with dynamic sitemap.ts/robots.ts and Schema.org JobPosting data.
